01 Experience

Aug 2025 — Oct 2026

Remote — United States

Front-end Developer

CoinFello

- Built the design system — token architecture, component library and the conventions that keep an interface coherent across contributors. 55 components, ready for dev.
- Implemented the system myself in typed React and SCSS, rather than specifying it for someone else to interpret.
- Turned the design system into context an AI agent could build from — a rulebook committed to the repository, and components read straight from Figma through the MCP rather than guessed from a screenshot. Around 70–85% of a generated component matched the system first pass; I reviewed every one as I would a junior's pull request.

TypeScript · React · SCSS · Design tokens

Nov 2024 — Jul 2025

Remote — Texas, United States

Front-end Developer

HyperPlay

- Worked in TypeScript and React on the interface I had previously helped design — written by hand, with no AI assistance.
- Carried design-system knowledge across the design/engineering boundary, which is where most systems quietly break.

TypeScript · React · Design tokens

Sep 2022 — Nov 2024

Remote — Texas, United States

Product Designer

HyperPlay

- Ran user research and interviews, and turned the findings into flows and interactive prototypes the team could argue with before anything was built.
- Responsible for the design system within the design team — token architecture, library and documented states — and built components for it, keeping it usable by the engineers consuming it.
- Also ran content and player support for over a year, troubleshooting with players and game developers, which fed straight back into the design.

Figma · Design tokens · Prototyping

Dec 2020 — present

Open source — remote

UX/UI Design Contributor → Front-end Contributor

Heroic Games Launcher

- Led the validation research in 2020 — desk research plus interviews with Linux users — which established that the product was worth building. It now has 500,000+ monthly users.
- Introduced surface-aware colour tokens and a semantic type scale that keep text legible across all 15 bundled themes.
- Built an atomic Modal component and restyled every modal in the app on top of it — 1,189 lines added, 1,248 deleted across 58 files.
- Rebuilt the game page and settings on shared layout primitives (Panel, SettingsCard, SettingRow, Alert, Tabs, SpecCard) across 266 files.
- Shipped the library redesign, the modal system, the Wine Manager, the downloads page, accessibility on the settings cards, and the game page and settings rebuild — each audited against the token system, designed in Figma on existing tokens, implemented in TypeScript and SCSS, and defended in public review.

TypeScript · React · SCSS · Electron · Figma

2025 — present

Independent — Google Play

Product Designer & Front-end Developer

Remote Work & HeavyMuscle

- Remote Work — remote jobs from five boards in one list, with an application tracker and a CV builder inside the app. Past 100,000 installs, eight languages.
- HeavyMuscle — a gym app with an AI coach that writes the plan, 873 animated exercises, and an offline-first logging screen designed to be used standing up with no signal.
- Designed every screen in Figma first and built the component layer underneath, produced the graphic material for both store listings, and iterate on the product with the team — which features ship and what they do.

Figma · TypeScript · React Native

Oct 2021 — Nov 2022

Stockholm, Sweden

UI/UX Designer

Starbreeze Entertainment

- Proposed an accessibility improvement for players with motion sickness — a fixed centre-screen reference point — identified from my own experience rather than from a brief.
- Tested the game as a player to find real friction, and designed quality-of-life and menu improvements against a player base with a decade of habits.
- Made the game's 2D assets — icons and in-game items — primarily in Photoshop and Illustrator, consistent with a visual language that predated me by eight years.
- Brought the assets into the build myself through the studio's in-house engine, rather than handing them over for someone else to integrate.

Photoshop · Illustrator · Figma · In-house game engine

Feb 2016 — Nov 2018

Alagoas, Brazil

User Interface Designer

Freelance

- Built client websites on WordPress and Joomla, from design through to the live site.
- Designed logos and brand marks for small businesses.
- Photo retouching and image preparation in Photoshop.
- No hand-off to anybody: whatever I designed, I was also the one who shipped it. That habit started here.

WordPress · Joomla · HTML & CSS · Adobe CC

02 Earlier

2012 — 2014	Full-time parenting	Career break	Maceió, Brazil. Started law school in the same stretch.
2011 — 2012	Graphic Designer	COLET Sistemas de Gestão Empresarial	Company logo, website, direct mail, social channels, Google Ads and Analytics.
2010	Graphic Designer	Instituto Federal de Alagoas	Banners, logos and the institute's website.
2010	Web Designer	O Consolador (NGO)	Redesigned the website and blog, in HTML and CSS.
2009 — 2010	Photo Retoucher	Espaço Fotográfico	Where the pixel-level attention came from.

03 Skills

Product & UX

Discovery & problem framing

User flows & information architecture

Prototyping

Game & launcher UI

Usability testing

Design critique & facilitation

UI & Systems

Design tokens

Component libraries

Figma architecture & variables

Documentation

WCAG 2.2 AA

Motion & interaction design

Engineering

TypeScript

React & Next.js

Tailwind CSS & SCSS

Electron

Docker & databases

AI-assisted workflow

04 Education

2025 — 2026	Postgraduate Degree — Information Technology	Rocketseat

2023 — 2024	UX Design Upskill	Hyper Island
2023 — 2024	Product Design Immersion	Aela
2022 — 2023	Upskill — Business Development, Digitalization & Sustainability	Hyper Island
2022	UX and Product Design	Berghs School of Communication
2018	Bachelor of Laws (LL.B.) — passed the Brazilian bar exam (OAB) in my final year. Licence active; focus on digital law, data protection, AI and blockchain Internships: small claims courts, Regional Labour Court of Alagoas, Alagoas Public Prosecutor's Office	Brazil

05 Certifications

- UX Design
- Web Design
- Visual Elements of User Interface Design
- JavaScript Algorithms and Data Structures (300h)
- 4º React Conference Brasil
